1 Chapter 1. General

1.1 About this document

This document contains instructions on using *LK Systems Manifolds MagiCAD plugin*.
LK Systems Manifolds MagiCAD plug-in allows inserting of LK Systems potable water manifolds, heating/cooling manifolds, floor heating manifolds and cabinets to the MagiCAD drawing.

1.2 Installing the software

1.2.1 Required third-party software

LK Systems Manifolds MagiCAD plugin works with the following MagiCAD for AutoCAD versions

- MagiCAD 2025 and AutoCAD 2021–2025
- MagiCAD 2026 and AutoCAD 2023–2026

1.2.2 Installation

1. Download the setup file from MagiCAD portal.
<https://portal.magicad.com/download/ProductSearch?searchStr=LK&categoryId=3>
2. Install the LK Systems Manifolds MagiCAD plug-in.

Administrator privileges are recommended for installation.

Note if you have several AutoCAD versions on your workstation:

Before you run the installation program, start MagiCAD to make sure that *LK Systems Manifolds MagiCAD Plugin* installs on the same AutoCAD platform as MagiCAD.

1.3 Starting the program

Before you start using *LK Systems Manifolds MagiCAD plug-in*, (re)-start MagiCAD and open a Heating and piping project.

The plug-in is automatically loaded and is ready to be used once AutoCAD is started next time after installing the plug-in.

2 Chapter 2. Functions

2.1 LK Systems Manifolds MagiCAD Plugin

Plug-in contains the following functions:

Open the LK Systems Manifolds Potable water or LK Systems Manifolds Heating/Cooling web page and insert new LK Systems UNI manifolds to the MagiCAD drawing.

Open the LK Systems Manifolds Floor heating web page and insert new LK Systems Floor heating manifolds to the MagiCAD drawing.

Open the dialog where user may edit the floor heating manifold data.

Copy to clipboard and export the list of materials from the selected LK Systems manifolds.

2.2 Insert UNI manifold

Click the UNI Potable water or UNI Heating/Cooling button on AutoCAD LK Systems Manifolds Ribbon/Toolbar.

Follow these steps for Inserting LK Systems UNI manifold to the MagiCAD drawing:

1. Add products to Cold potable water / Supply manifold / Lower manifold and Hot potable water / Return manifold / Upper manifolds by repeating the following steps
 - 1.1. Select appropriate manifold type.
 - 1.2. Select appropriate manifold from the list of products of selected manifold type.
 - 1.3. Specify size and type of outlet connections.
 - 1.4. Press Add button to add manifold to supply or return to manifold. The product on the top of the list will be most left in the manifold.

2. Select feed pipe position and possible ball valve for the manifold.
 - If the feed pipe is not straight and valve is not selected - the angle would be a part of the manifold as on a picture below.
 - If the feed pipe is not straight and a valve selected - the angle on a picture below is just a schematic and angle valve will be inserted.
3. Cabinet and cabinet's frame can be removed if needed.
4. Enter the number of accessories for the manifolds. For the automatically generated accessories the amount is read-only.
5. Select the MagiCAD system for the manifolds.
6. Select pipe series for the pipes if manifold valves are selected
7. Enter the installation height.
8. Enter the user code for MagiCAD.
9. Enter description for MagiCAD and material list.
10. Press Install button to install the manifold or cancel to close the dialog.

2.3 Insert Floor Heating Manifold

Click the RF Floor heating button on AutoCAD LK Systems Manifolds Ribbon/Toolbar.
Follow these steps for Inserting LK Systems RF floor heating manifold to the MagiCAD drawing:

1. Select appropriate manifold type
2. Select the size of outlet dimension.
3. Select LK Manifold Shunt VS or Flow or Return ball valves.
4. Select feed pipe position.
5. Cabinet can be removed if necessary.
6. The base for the Cabinet can be selected if the Cabinet is selected.
7. Enter the number of accessories for the manifolds. For the automatically generated accessories the amount is read-only.
8. Select the MagiCAD system for the supply and return sides.
9. Select pipe series for the pipes if manifold valves are selected.
10. Enter the installation height.
11. Enter the user code for MagiCAD.
12. Enter description for MagiCAD and material list.
13. Press Install button to install the manifold or cancel to close the dialog.
14. Input Flow and Pressure drop for manifold. You may also select if manifold will use system temperature difference or input different one.

Note that there are no connections for supply/return floor heating pipes.

2.4 FH Calculation data

 FH calculation data

Click the FH calculation data button on AutoCAD LK Systems Manifolds Ribbon/Toolbar and select then floor heating manifold in drawing. Easy to check values and change those.

The dialog box is titled "LK Systems Manifold Calculation...". It contains the following fields and controls:

- MagiCAD system:** A dropdown menu showing "H1 'Heating 1'" with a downward arrow.
- Flow:** A text input field containing "11" followed by the unit "l/h".
- Heating power:** A text input field containing "367" followed by the unit "W".
- Pressure drop:** A text input field containing "22" followed by the unit "kPa".
- Use given temperature difference:** An unchecked checkbox.
- Temperature difference:** A text input field containing "30" followed by the unit "°C".
- Buttons:** "Finish" and "Cancel" buttons at the bottom right.

Figure 8 LK Systems floor heating manifolds calculation data dialog

2.5 Material list

Click the Material list button on AutoCAD LK Systems Manifolds Ribbon/Toolbar.

Select the manifolds to export to material list.

Figure 9 LK Systems manifolds to be selected for list of materials

Press Enter when all the manifolds are selected.

If LK Systems manifolds were found in selected entities, "LK Material list is copied to clipboard" message will appear. If LK Systems Manifolds were not found in selected entities, "No LK manifolds selected" message will appear.

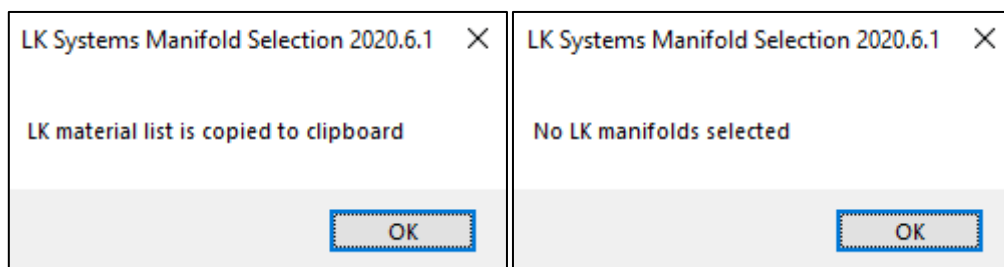

Figure 10 Material list copy dialog and Manifolds not selected dialog

Exported material list can be pasted to Microsoft Excel.
