

MagiCAD for AutoCAD

Release notes for version 2022.1

16/08/2021

Content

1	RESOLVED ISSUES	3
1.1	Common.....	3
1.2	Ventilaion and Piping.....	3
1.3	Electrical.....	3
1.4	Schematics.....	4

1 Resolved issues

1.1 Common

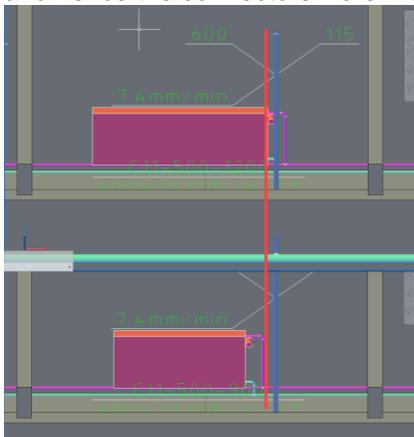

Revision cloud was invisible while drawing

In AutoCAD 2022 the revision cloud was invisible while it was drawn and became visible after the user had finished drawing it. This issue did not affect other versions of AutoCAD.

1.2 Ventilaion and Piping

Changing the size of the radiator

Changing the size of the radiator did not work correctly as the enter of the radiator was maintained, and hence the connectors were moved:

This has now been fixed and the connectors remain in place.

IFC Export issue related to plugin products

Issues related to handling some plugin products caused the IFC Export to get stuck. This has now been fixed.

1.3 Electrical

Feeder block messes up dwg references and updating

Edit Feeder block no longer creates incorrect reference to plan dwg.

Edit References function does not mess up switchboard schematic data blocks.

Column settings saved to project causes issues

When having column settings saved to project, it locked the project file always when going to project or to install product dialog even when no changes were made.

Now it doesn't save column settings if they are not modified.

1.4 Schematics

PDF Batch Export button opened the PDF Export's dialog

The PDF Batch Export button didn't open the batch export dialog, but the normal PDF Export dialog. This has now been fixed and the PDF Batch Export button starts the correct function:
